

PLSS CadNSDI Data Set Availability

September 2016

BLM Cadastral Survey, the FGDC Cadastral Subcommittee, Premier Data Services, and Fairview Industries, have teamed over the past four years to complete the standardized PLSS data for nearly all of the 30 Public Domain states. Oklahoma is the only state waiting to be completed and it is in process. These data sets represent about 40 million parcels that provide the basis for parcel mapping, land governance decisions, and navigation of cadastral data in Public Domain states.

The table below provides a link to the zipped file geodatabase containing the PLSS CadNSDI for the state and if available, the link to the data steward where the PLSS CadNSDI is available. Users should always check with the data steward for any updates to the dataset. The files listed here indicate the vintage, which is the date in the zipped file name, is the date the data set was last updated. NOTE: the geodatabase name will not have the date, only the zipped file.

These files are rather large. To download, copy the link and paste it in a new window in your browser, or click on the link. if the data steward provides current download, the file is not duplicated here.
